

Claims Available in the CO APCD Warehouse

September 2026

The Colorado All Payer Claims Database (CO APCD) is a state-legislated, secure health care claims database representing the vast majority of insured lives in Colorado with more than ten years of data from commercial health insurance payers, Medicaid, and Medicare (Fee for Service and Advantage).

CIVHC collects commercial and Medicaid claims monthly, and the entire CO APCD Data Warehouse is refreshed and processed every other month to continually improve the data quality.

<i>Note: This flier provides a snapshot of data content and quality upon the most recent refresh.</i>	 Medical	 Pharmacy	 Dental	 Vision	 Enrollment
Commercial (including Medicare Advantage) Over 7.2 million covered individuals	✓ Paid through 6/2026	✓ Paid through 6/2026	✓	✓	✓
Medicaid Over 5.4 million covered individuals	✓ Paid through 6/2026	✓ Paid through 6/2026	✓	✓	✓
Medicare FFS * Over 1.4 million covered individuals	-----	-----	*Not covered through Medicare FFS	-----	-----

**Please Note:* Following the [transition to Onpoint Health Data](#) as the new vendor of the CO APCD, Medicare FFS data is moving through a separate federally required process. Our teams are actively working to make the data available in the new environment as soon as possible. Availability could begin as early as November 2026, with January 2027 currently considered the more likely timeframe. Data will be made available in phases as processing and validation are completed.

Data Quality Refresh Updates

With each Data Warehouse update, documentation related to the data quality and overall health of the database is updated.

Submitter Quality Index (SQI)

The Submitter Quality Index (SQI) is a measurement tool designed by CIVHC analysts to help assess the quality of data submitted to the CO APCD and gives a picture of the overall health of the database.

The SQI for results are temporarily paused following the CO APCD data vendor transition to Onpoint. SQI documentation will be updated and is expected to resume after the next data warehouse refresh in September.

[Click here to learn more about the SQI](#)

Data Refresh Materials

With each Data Warehouse refresh, the Data Operations team publishes Release Notes with updated documentation of all data issues identified and solved. This includes not only issues with the latest warehouse refresh, but a complete historical documentation of any known data quality problems or observations, their impact, and resolution status.
