53%

received at least one of the 1.36M 48 services measured.

> of those individuals received at least one low value service (likely wasteful or wasteful).

# The highest proportion of spending for low value services varied by payer type:

Commercial

**Medicare Advantage** 

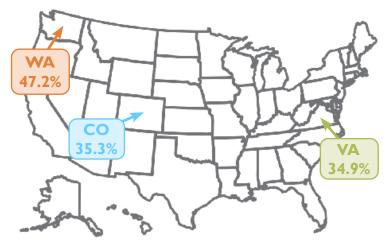

**Procedures** 

(screenings and tests, surgical

procedures, etc.)

## Geography

Two other states (Washington and Virginia\*) have used the MedInsight Low Value Care tool to evaluate claims data. The results for utilization of low value services in Virginia were similar, while Washington state's were significantly higher:

\*Costs for low value services should not be compared across states. The analysis conducted by Washington and Virginia accounted for all costs included in the claim, whereas the Colorado analysis only included the cost for the low value services identified. Percentages reflected in the map above display utilization of the low value services measured.
