Community Dashboard Annual Check Up

The Health Care Quality and Prevention Check Up shows Coloradans are receiving more preventive care. According to the CDC, 70% of deaths in the United States result from chronic disease — and half the population has some chronic illness such as cancer, diabetes, or heart disease. Preventive medical care such as annual physicals and other doctor visits, and regular dental care, can ward off chronic disease in the long run. This information answers essential questions regarding trends in preventive services that can inform where communities and organizations focus their efforts to decrease chronic disease. For details on each measurement, refer to the methodology for the Community Dashboard at civhc.org.

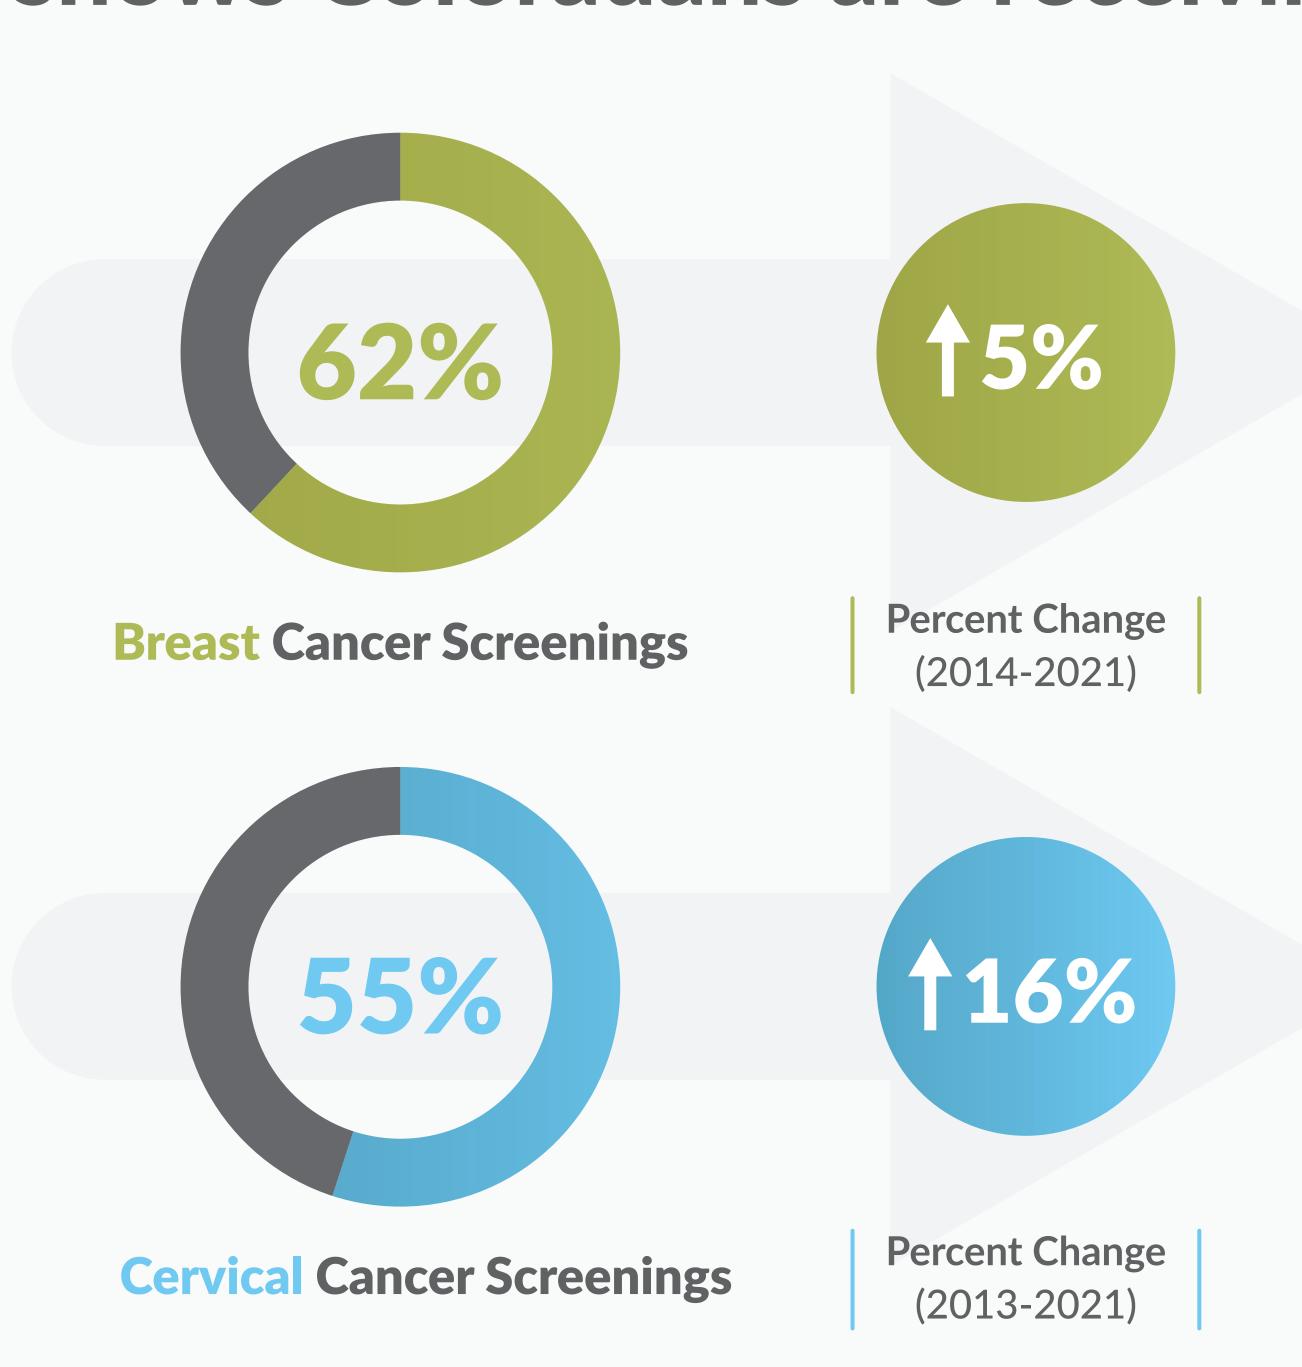

The Community Dashboard from the Center for Improving Value in Health Care (CIVHC) helps users identify ways to reduce health care spending, and improve health care use, access and quality across Colorado communities.

For information on how social factors are related to the data here and in the Community Dashboard, visit our Health Equity Analysis.

2013-2021

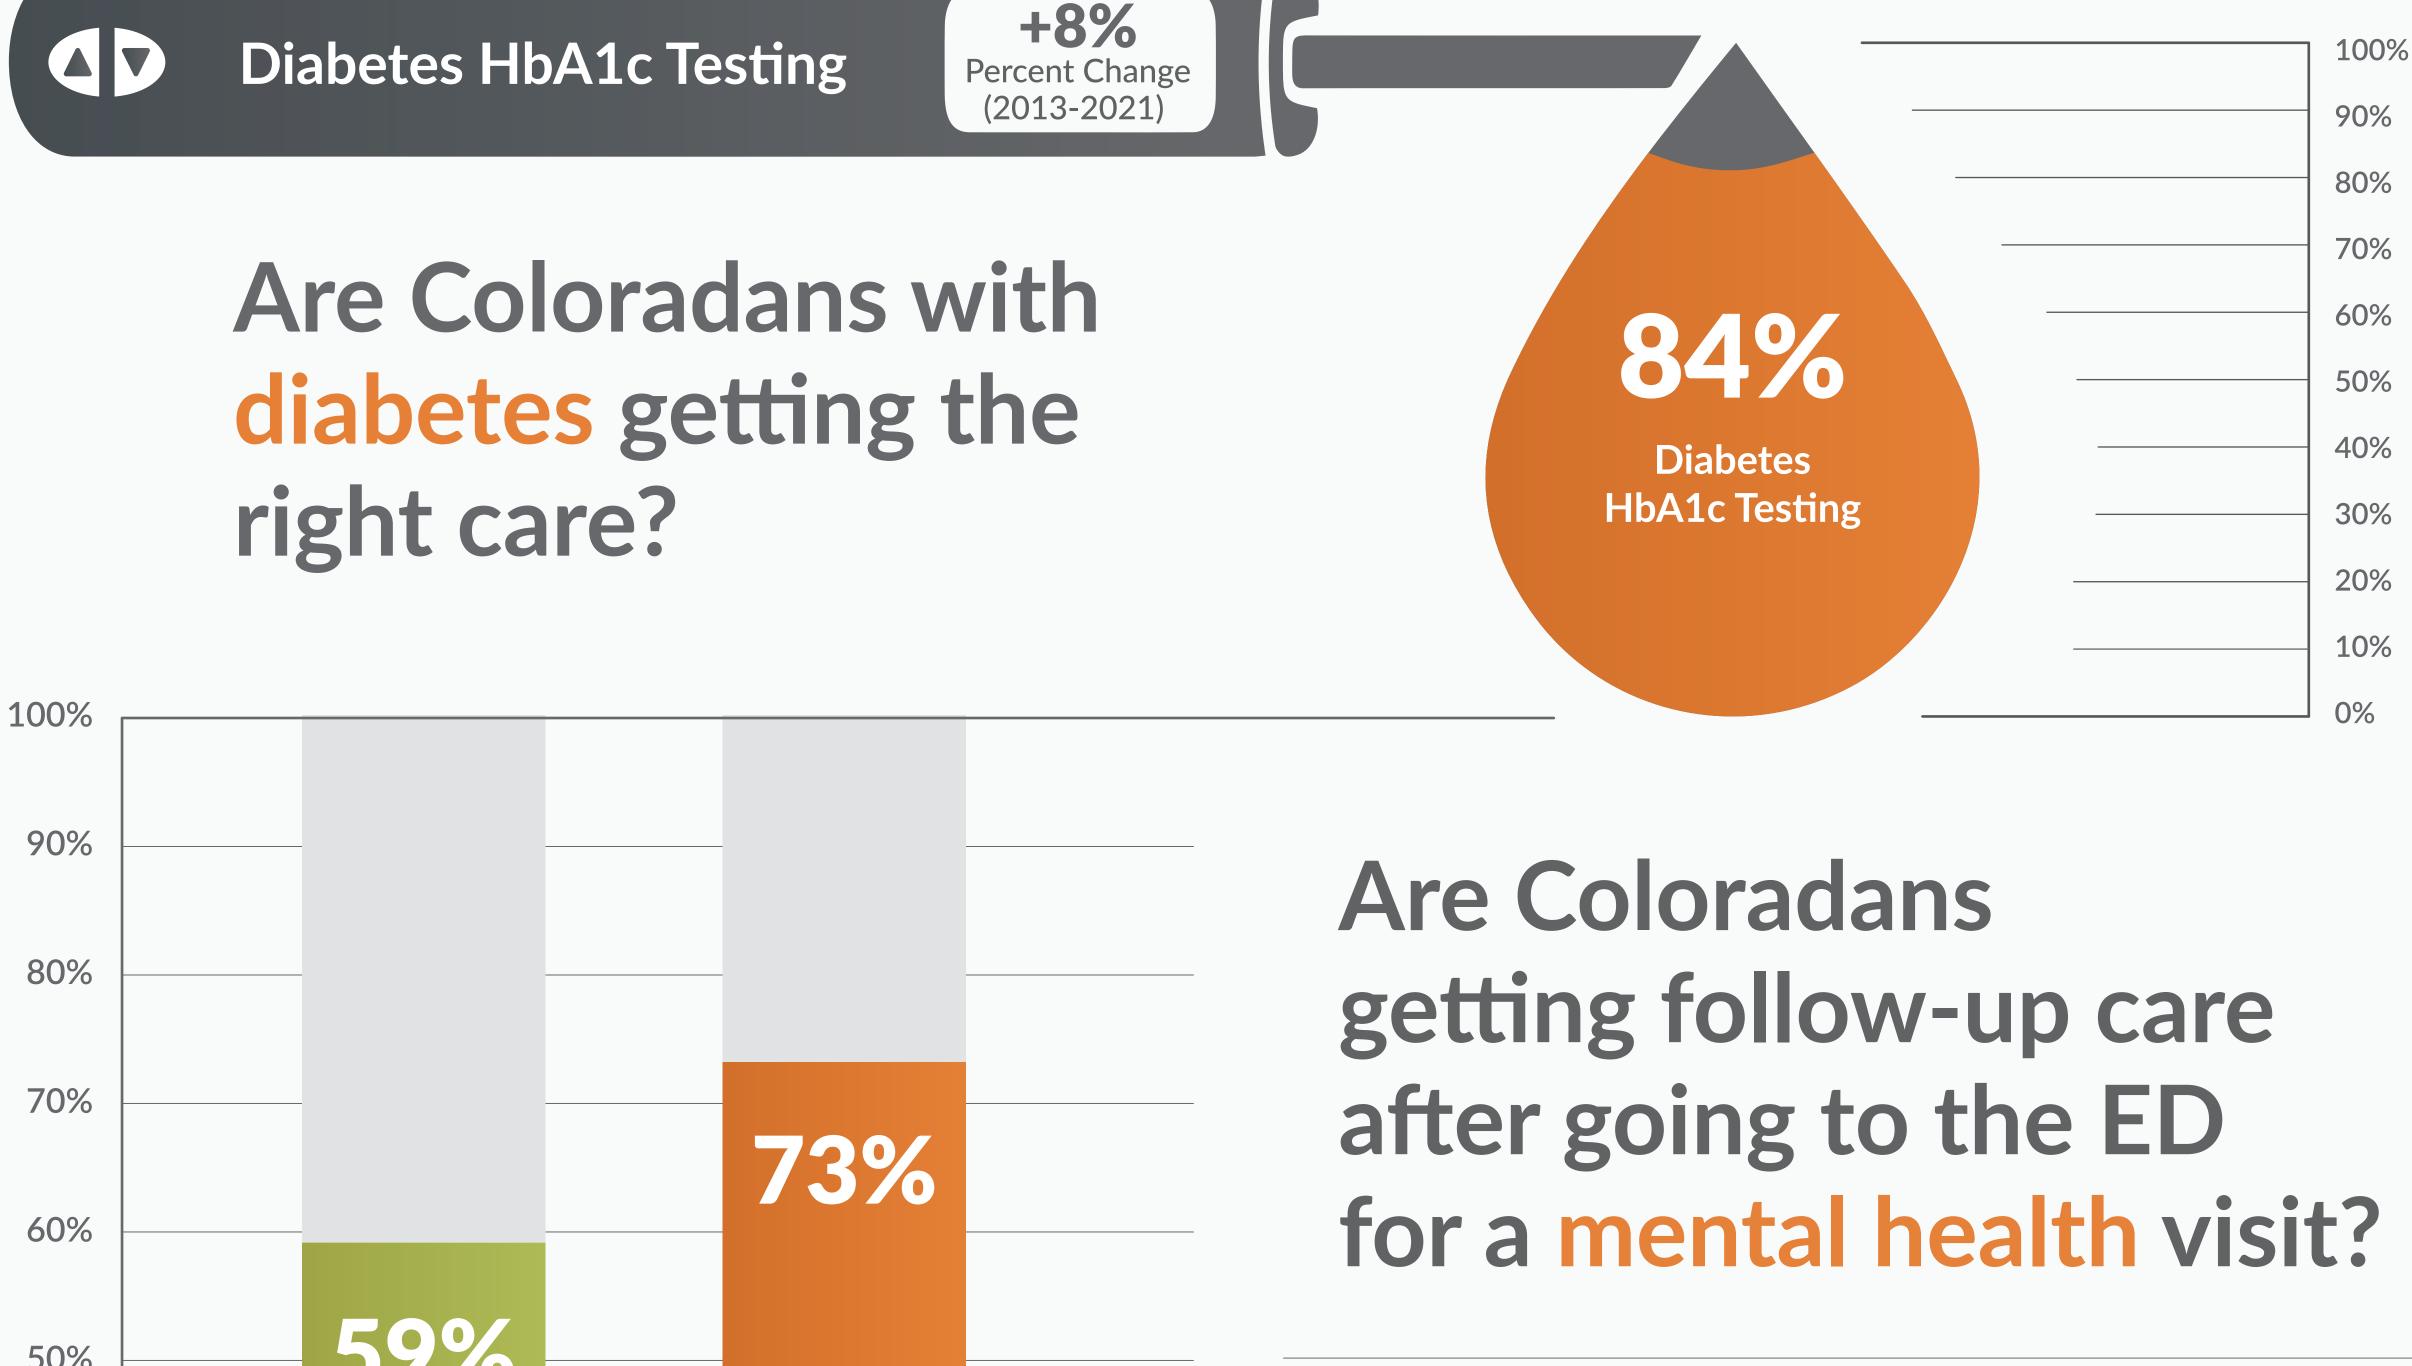

The Health Care Quality and Prevention Check Up shows Coloradans are receiving more preventive care.

Are Coloradans getting screened for cancer?

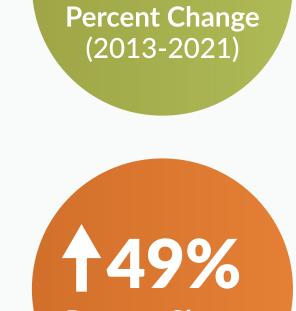

- **Breast Cancer Screenings**
- **Cervical Cancer Screenings**
