Provider Payment Tool **Use Cases**

The Provider Payment Tool, enacted through Senate Bill 22-068, enables Coloradans to understand how payments to health care providers for services vary between years, provider types, insurance payers, and regions across the state. This first-of-its-kind tool, based on data in the Colorado All Payer Claims Database, can be used by a number of audiences looking to increase access to equitable, affordable care.

A few example use cases

The tool can answer questions like:

How much are providers typically paid for a 45-minute therapy session (CPT[®] 90834) and have payments changed since 2018?

Do commercial insurance payments for office visits (CPT[®] 99213) vary for different provider types?

are provided below.

Self-Insured and Full Insured Employers:

Self-insured:

> Understand what you are paying for services verses other payers in your area and statewide. Use this information to discuss rates with your insurance broker or TPA/ASO.

• Fully-insured:

Point employees to the tool if they have questions about how much a service may cost, or related to provider bills they received and whether the price was reasonable.

Health Insurance Payers and Health Care Providers:

Benchmark how your payments for services compare to your peers. Use this information when discussing annual rate changes.

State Agencies and Policy Makers:

Identify variations in payments for procedures across the state. Determine where there may be opportunities to reduce price variation and increase access to care.

1

What do anesthesiologists in Arapahoe County get paid to perform a 45-minute inpatient appendectomy (CPT[®] 00840) on a healthy patient?

Consumers and Advocacy Organizations:

Use the tool to understand common prices for specific services, and talk to your providers and/or health insurance payer if there is a discrepancy in prices for services you plan to receive or did receive.

*All payments above represent median total allowed amounts (payer and patient payments combined).
