Claims Available in the CO APCD Warehouse
March 2025

The Colorado All Payer Claims Database (CO APCD) is a state-legislated, secure health care claims database representing the vast majority of insured lives in Colorado with more than ten years of data from commercial health insurance payers, Medicaid, and Medicare (Fee for Service and Advantage).

CIVHC collects commercial and Medicaid claims monthly, and the entire CO APCD Data Warehouse is refreshed and processed every other month to continually improve the data quality.

Note: This flier provides a snapshot of data content and quality upon the most recent refresh.	Medical	Pharmacy	Dental	Vision	Enrollment
Commercial (including Medicare Advantage) Over 7.2 million covered individuals	✓ Paid through **12/2024**	✓ Paid through **12/2024**	✓	✓	✓
Medicaid Over 5.4 million covered individuals	✓ Paid through **12/2024**	✓ Paid through **12/2024**	✓	✓	✓
Medicare FFS Over 1.4 million covered individuals	✓ Paid through **12/2023**	✓ Paid through **12/2022**	*Not covered through Medicare FFS*	✓	✓

Data Quality Refresh Updates

With each Data Warehouse update, documentation related to the data quality and overall health of the database is updated.

Submitter Quality Index (SQI)

The Submitter Quality Index (SQI) is a measurement tool designed by CIVHC analysts to help assess the quality of data submitted to the CO APCD and gives a picture of the overall health of the database.

The SQI for results for the **March** refresh was **95% out of a possible 100**, indicating few errors in submitted data.

[Click here to learn more about the SQI](#)

Data Refresh Materials

With each Data Warehouse refresh, the Data Operations team publishes Release Notes with updated documentation of all data issues identified and solved. This includes not only issues with the latest warehouse refresh, but a complete historical documentation of any known data quality problems or observations, their impact, and resolution status.

✓ The **Release Resolution Log Summary** documents the most notable findings from the latest log release and provides guidance for data users on how to navigate these identified issues.
